Description

Features:

- High surge handling capability
- Economical secondary protection
- Thermal and overcurrent fusing
- Visual fault indication
- Differential and common mode protection

These plugs are fitted with an overcurrent and thermal fuse. In the rare event of varistor failure, the varistors are disconnected from the mains supply, preventing any dangerous temperature rise. The fault indication LED which is normally lit will go OFF to indicate the faulty protection has been disconnected. Mains power will still be available to the unprotected equipment.
